## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 48 is rejected under 35 U.S.C. 102(e) as being anticipated by Sieber (US 6,799,547 B2). As disclosed at column 7, lines 35-67, cylinder No. 1 and cylinder No. 3 are selected and fired so as to cause reverse rotation, which is “independently of the normal operating stroke cycles” to the extent required by claim 48, given the broadest reasonable interpretation pursuant to MPEP §§ 2111 and 2111.01.

### ***Allowable Subject Matter***

Claims 1-17 and 50-52 are allowed.

Claim 49 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3747

### ***Response to Arguments***

Applicant's arguments have been fully considered but they are not persuasive. Claim 48 lacks sufficient detail to distinguish over the prior art as applied. At column 7, lines 41-52 Sieber states:

"At the onset 14 of the starting process, fuel is injected into the combustion chamber 4 of cylinder No. 1. If the high-pressure pump is driven by the engine 1, then the injection takes place only at the rail pressure EKP of the electric fuel pump. Otherwise--that is, when the high-pressure pump is driven independently of the engine 1--the fuel, for the sake of mixture preparation, is injected into the combustion chamber 4 at high pressure. Then the injected fuel is likewise ignited in the compression phase. The consequence is a first combustion, by means of which the crankshaft 10 is set into a rotary motion oriented in reverse."

The reverse rotary motion as described is independent of the normal operating stroke cycles to the extent required by claim 48.

One must bear in mind that, especially in nonchemical cases, the words in a claim are generally not limited in their meaning by what is shown or disclosed in the specification. See, e.g., *Liebel-Flarsheim Co. v. Medrad Inc.*, 358 F.3d 898, 906, 69 USPQ2d 1801, 1807 (Fed. Cir. 2004).

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 3747

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
